## SARASOTA COUNTY CLERK AND COMPTROLLER SELECTS PIONEER TECHNOLOGY GROUP TO IMPLEMENT NEW COURT CASE MANAGEMENT SYSTEM

**April 1, 2010:** Pioneer Technology Group was awarded a court case management contract with the Sarasota Clerk of Circuit Court & County Comptroller. The decision was reached through a formal Request for Proposal (RFP) process.

Sarasota County will become the 8<sup>th</sup> county in Florida to install Pioneer Technology Group's Court Case Management Software, **Benchmark**. The move will help soften the blow from budget cuts for the Florida Clerks. Benchmark uses the latest in paperless technology to allow users to process court files electronically rather than by paper. The efficiencies gained by the systems will, over the course of the contract, save Sarasota County Taxpayers time and money.

**Benchmark** is a true Paper-on-Demand Court system that reduces or eliminates the need for paper court documents while still giving users comfort knowing they can generate paper documents with the click of a button. Benchmark is a unique blend of Web tools and Client Server processes that have been developed using Microsoft's .Net platform and SQL Server 2005. The system incorporates document imaging, improved workflows, electronic filing, electronic signatures, Web tools for the Judiciary and in-court processing techniques that will allow counties to cut their overall court operation costs by 20% to 25%.

**Pioneer Technology Group** is a software developer and supplier of goods and services to county governments and the private sector. The company is headquartered in Sanford, Florida, and offers a variety of software solutions and services, including court systems, tax systems, Value Adjustment Board systems, content management systems and a back file conversion services bureau for customers transitioning from paper to image storage.
